

opencorporates

The background of the slide is a dark, textured aerial map of a city, likely New York City, showing a dense network of streets and buildings. Overlaid on the right side of the map is a cluster of red circles of various sizes, creating a decorative graphic element.

‘Company registry for the world’. The largest open database of companies in the world is shining a light on the corporate world

180+ million companies
220+ million officerships

'Company registry' for the world, open for everyone

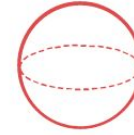

Public official, legal entity data

All our data comes from primary public sources – we don't buy any third-party data, and are transparent about – meaning users can rely on OpenCorporates data.

Data at scale

We are the largest open database of companies in the world. We have 160+m companies from 130 jurisdictions, all bought together into a standardised global schema.

Open identifiers

Unlike the traditional 'black-box' data providers, OpenCorporates provides open (non-proprietary) identifiers based on the identifiers issued by the official source.

Full provenance

We're clear about where we got our data, and when we got it, unlike the 'black-box' data of the traditional proprietary providers.

Direct from source

We only collect data from the official source itself, we do not use third party data providers to access this data, and we provide direct line of sight to the original source.

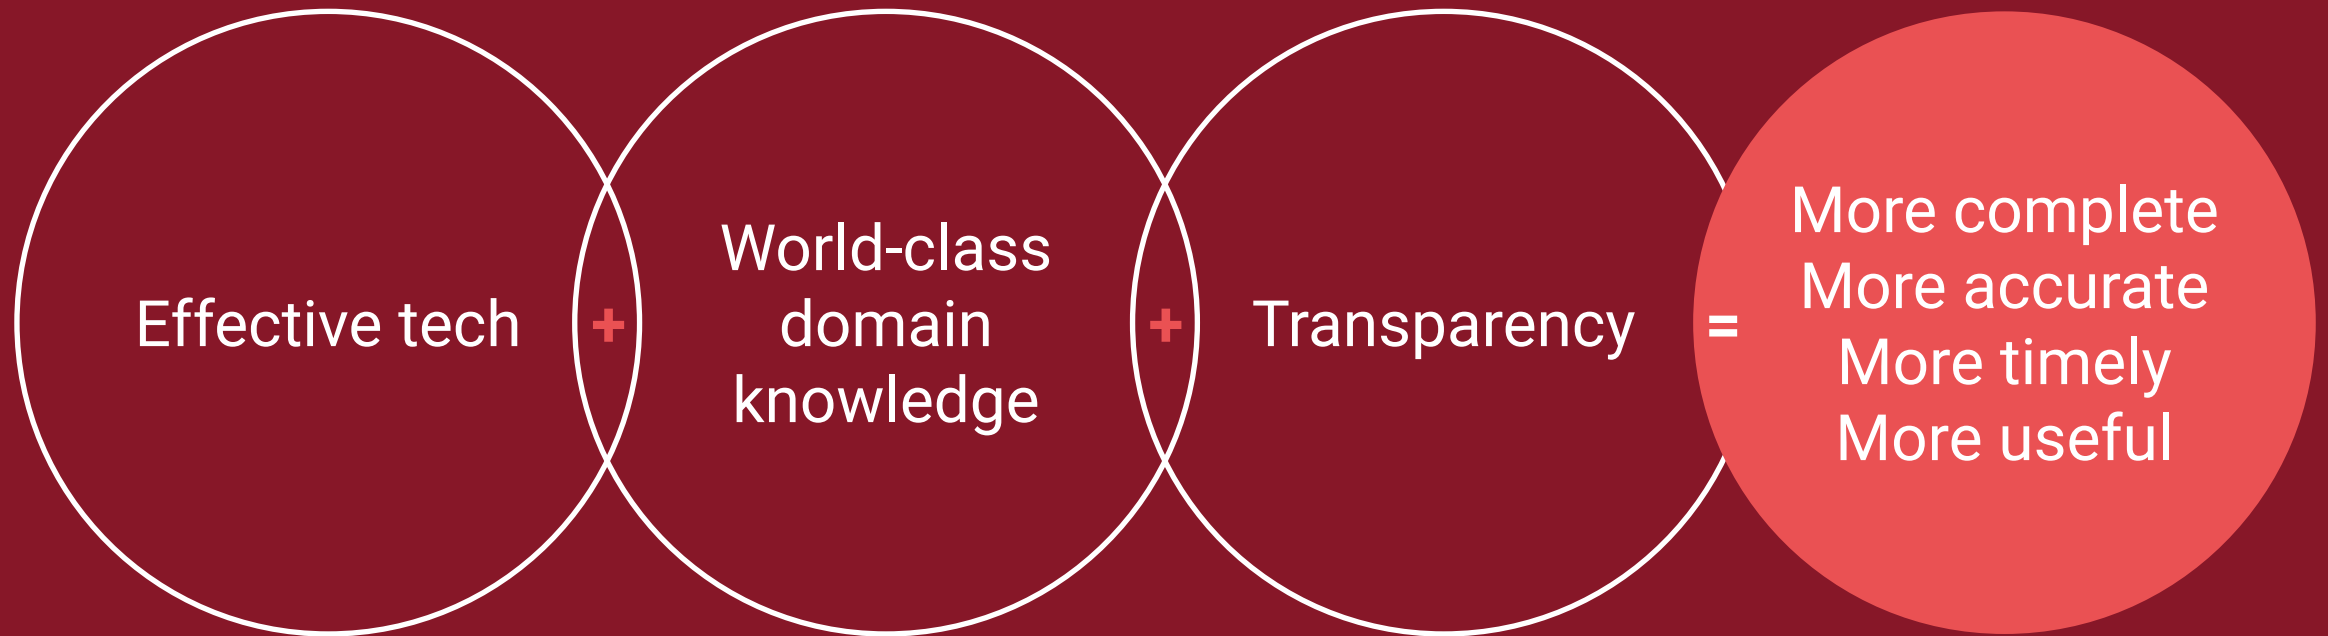

Tech driven

Combined with the above principles, our custom-built data collection, QA and reconciliation technology gives us a significant competitive advantage over legacy business information companies.

The Challenge

To achieve this, we developed a highly efficient collection system and deep domain expertise to ensure companies remain open and transparent in the future

In our global corporate world, clear, trusted, open, legal entity data is an essential requirement for good business... and a fair society

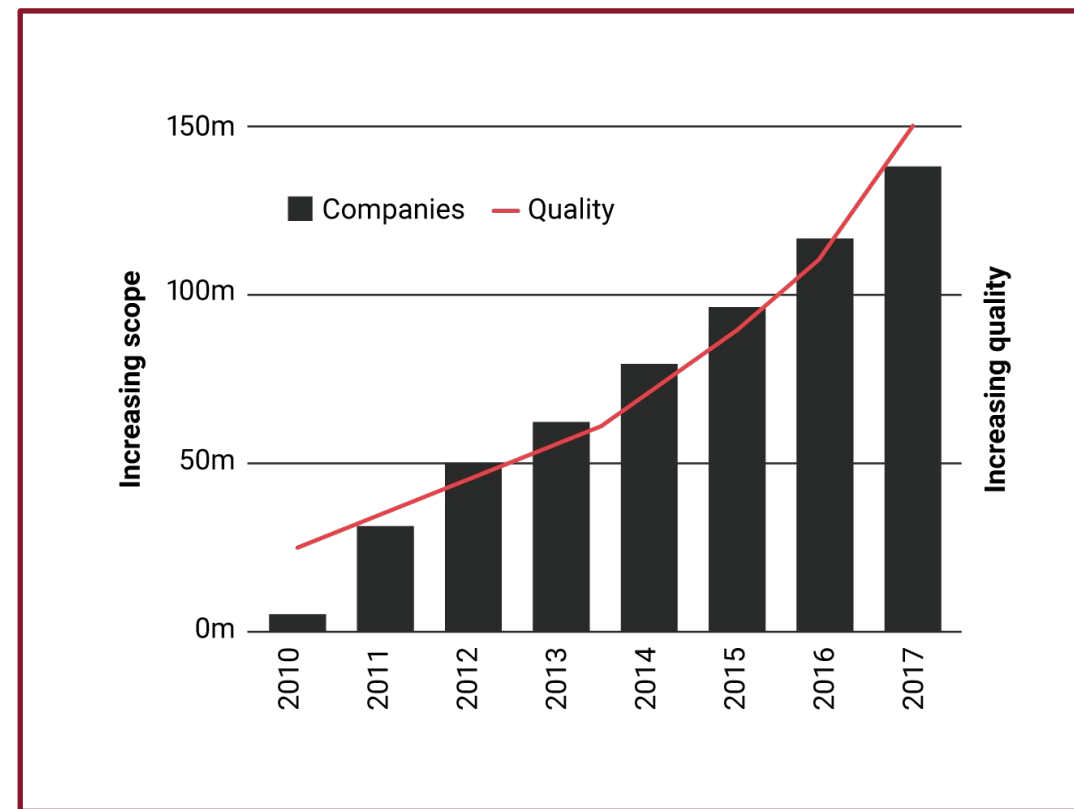

Today it's difficult. Tomorrow
it will be even harder

Automatically collecting company data from hundreds of official sources

Using our own custom bot framework and QA systems, we analyse it, understand it, standardise it, and make available to a level and freshness never before seen.

We then make available in a consistent form, including full provenance, providing a clear line of sight to the source and provide alerts to changes.
